

BSAG & Ocean literacy

Laura Höijer, Content Director, BSAG

BSAG works **to restore the ecological balance of the Baltic Sea**, major themes: 1) Mitigating eutrophication and climate change (especially through regenerative agriculture) 2) Managing environmental risks (focusing on marine traffic) & 3) Safeguarding biodiversity (for example by marine for example by marine conservation areas)

We work with a variety of actors relevant to the wellbeing of the Baltic Sea, such as farmers, politicians, company executives and civil servants

Ocean literacy is at the heart of our work. In practice we discuss the linkage of their actions to the Baltic Sea with all of our collaborators, from companies and scientists to farmers. Holistic view and the interconnectedness of our actions is in the very core of our thinking. We also have a BSAG Baltic Sea School in order to reach the school children.
