

**22 – 24
AUGUST 2018**

BALTIC BLUE BIOTECH ALLIANCE
INTERNATIONAL CONFERENCE

**Blue Biotechnology
In Baltic Sea Region
From Science to Business**

GREIFSWALD, GERMANY

**SAVE
THE
DATE**

TOPICS

Industrial applications of marine organisms and biomass
Marine biomass production technology
Secondary metabolites and bioactive enzymes
Marine biotechnology networks and business development
Legal aspects and patenting

BioCon Valley®

International Conference

Blue Biotechnology in Baltic Sea Region – from Science to Business

August 22 -24, 2018 | Alfried Krupp Wissenschaftskolleg Greifswald, Germany

Marine or blue biotechnology is a young field in modern biotechnology yet based on long lasting tradition in basic science at the universities on the shores in Northern Europe. By the rise of the blue biotech business, biological resources from marine habitats became more and more attractive. Since life in the oceans evolved strategies to survive in harsh environments, marine organisms are a promising source for new medical drugs, new enzymes for food and feed production, and provide alternative routes for the production of chemicals. Newest results in basic and applied science and successful results of economic implementation will be showcased.

The conference is part of the project „Baltic Blue Biotech Alliance“, funded by EU INTERREG BSR. The initiative represents a step forward in the implementation of the BLUE GROWTH strategy of the European Union. Up to 120 scientists, entrepreneurs and stakeholders from the public and the private sector will attend. There is *no registration fee* for your participation. Please do not hesitate to contact Rainer Cramm at the [BioCon Valley](#) organization office by phone +49 3834 8719896 or by e-mail: rc@bcv.org.

The conference is linked to MIMAS2-Symposium [Microbial Interactions in Marine Systems](#) on August 20-21, 2018. The symposium takes place in the same location and is focused on basic science. Participants are invited to join both conferences.
